If you have [added classmates](#) or family members to your website and included their email address, they will be able to reclaim and access their profile.

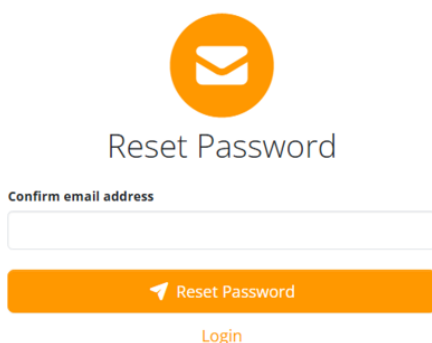

Depending on how your website is set up, visitors can go to either the Register page or the Classmates page. On that page, they will see a login form, similar to the example below.

The login form features a large orange circle with a white person icon at the top. Below it is the word "Login" in a grey sans-serif font. The form includes an "Email address" label above a white input field, followed by a "Password" label above another white input field with a small eye icon on the right. Below the password field is a "Forgot Password" link in orange text. A prominent orange button with a white right-pointing arrow and the word "Login" is positioned next. Below this button is a horizontal line with the text "Or login with" centered. Underneath are two buttons: one with a blue Facebook "f" logo and another with a red "G" logo. Another horizontal line follows, with the text "Not registered yet?" centered. At the bottom is a wide, thin orange button with the word "Register" in orange text.

If the user was pre-registered by you, they should click on “Reset Password” and enter the same email address you used when creating their profile.

Once submitted, the user will receive an email with a password reset link.

The "Reset Password" form starts with an orange circle containing a white envelope icon. Below the icon is the text "Reset Password" in a grey sans-serif font. The form contains a "Confirm email address" label above a white input field. Below the input field is an orange button with a white right-pointing arrow and the text "Reset Password". At the very bottom, centered, is the word "Login" in orange text.

After setting their password, they will be able to log in normally and will have full access to their

profile.
