Creating Your First Pages

Category: Pages & Content
Published: Feb 03, 2026
Reading Time: 1 min

Before creating pages, it’s important to understand that the number of pages you can create **depends on the package you have**.

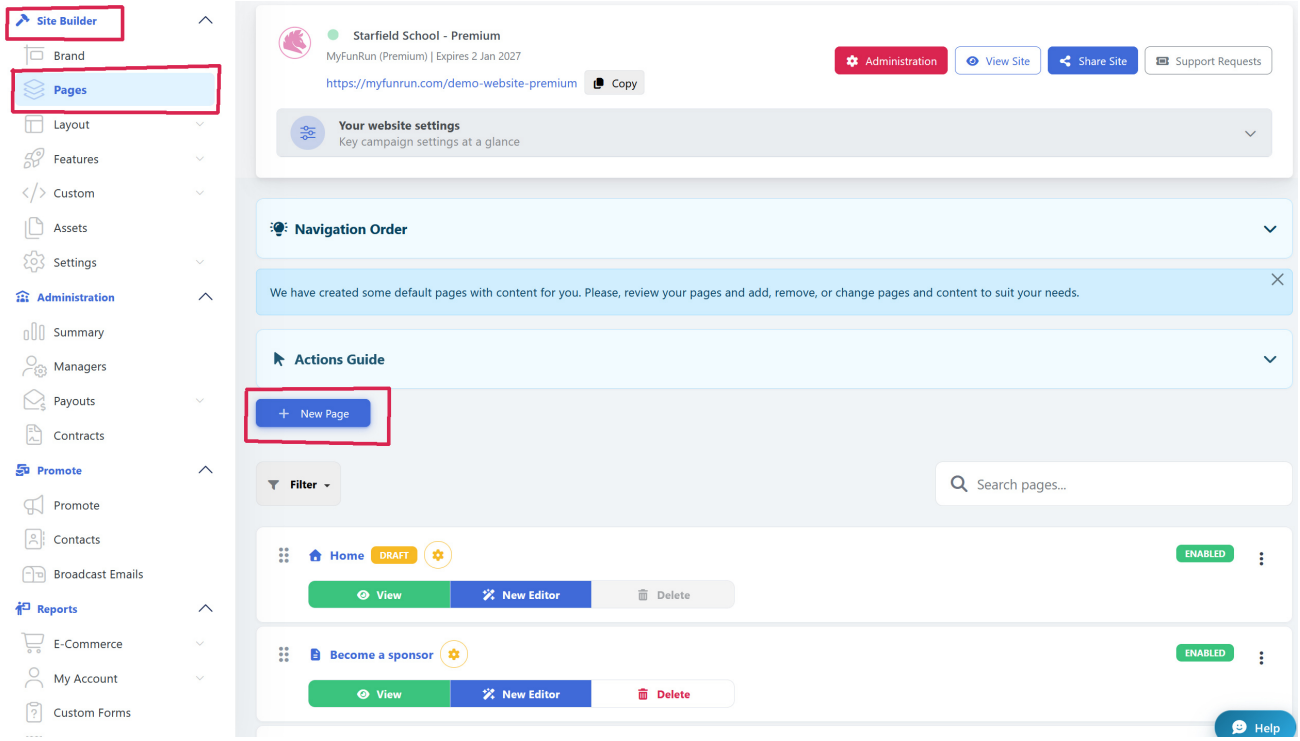

Step 1: Review your package
Each package comes with a specific page limit. If you are on a **Premium package**, you’ll have access to create **more pages** compared to other plans.

Step 2: Access the Pages section

Go to **Site Builder > Pages**.

Step 3: Create a new page
Click on **New Page** to create a page, making sure you stay within the page limit allowed by your package.

Step 4 (Optional): Recover a deleted page
If a page was deleted by mistake, click on **Deleted Pages** on the right side to restore the page along with all of its content.

In the creation form, insert the title of your new page and the URI, which is the url of the page.

If you would like to disable the page and hide it from the public, you can click in Status and select Enabled or Disabled.
