Photo Albums on Your Website

Photo albums are one of the most important parts of any event website.

They help bring back memories, spark conversations, and keep your visitors coming back to your site.

Your website already includes a **Photos** page, pre-set with a photo album so you can get started right away.

All that's left to do is upload your photos.

You can also create multiple albums or place photo albums on other pages of your site.

If you'd like to do that, check out our article on **Managing Content on a Web Page**.

How to Add, Edit, or Remove Photos

To manage the photos in your default album, follow these steps:

1. From your Dashboard, go to **Site Builder → Features → Albums**
2. You'll see your album listed. Click the **pencil icon** next to it to edit
3. Click **New Photo**
4. Either click inside the upload box or drag and drop your images to upload

5. Once uploaded, drag photos to rearrange them in the order you prefer

That’s it—your photos will instantly appear on your website for everyone to enjoy.
