Editing the Header Menu Text

Category: Design, Branding & Navigation
Published: Feb 24, 2026
Reading Time: 2 min

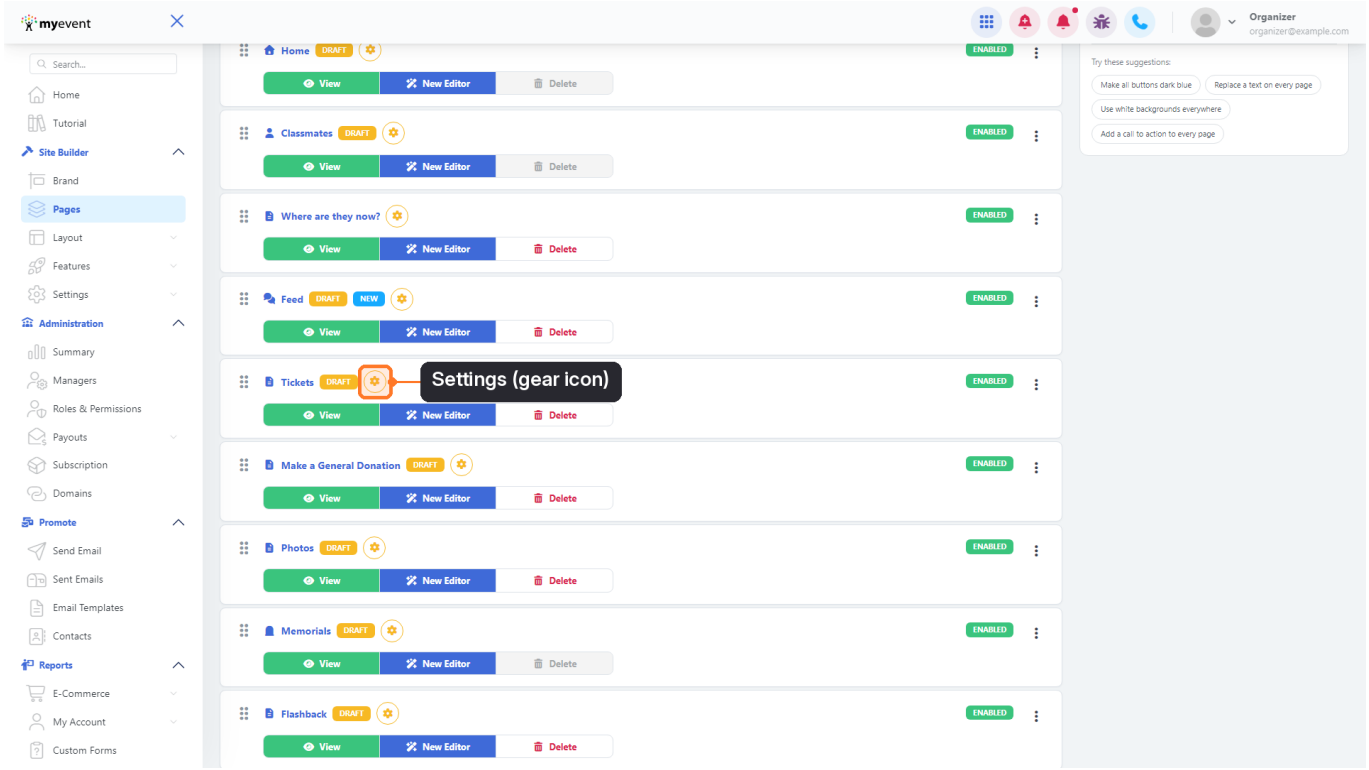

Want your menu to say **Register** instead of **Tickets**, or **Our Story** instead of **About**? Each link in your site's header menu uses the title of a page, so to change a menu label, you just rename the page.

Package: Basic

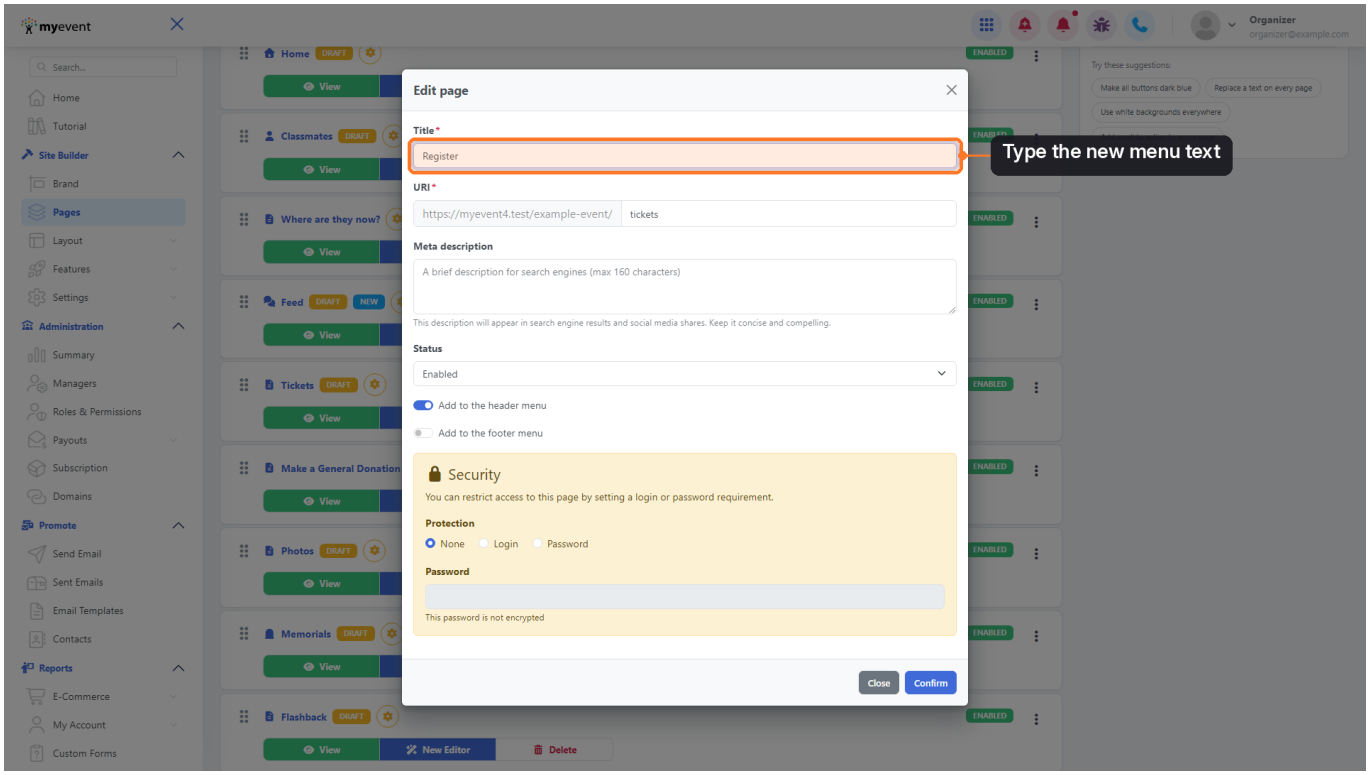

Step 1: Open your pages From your dashboard, go to **Site Builder** and click **Pages**.

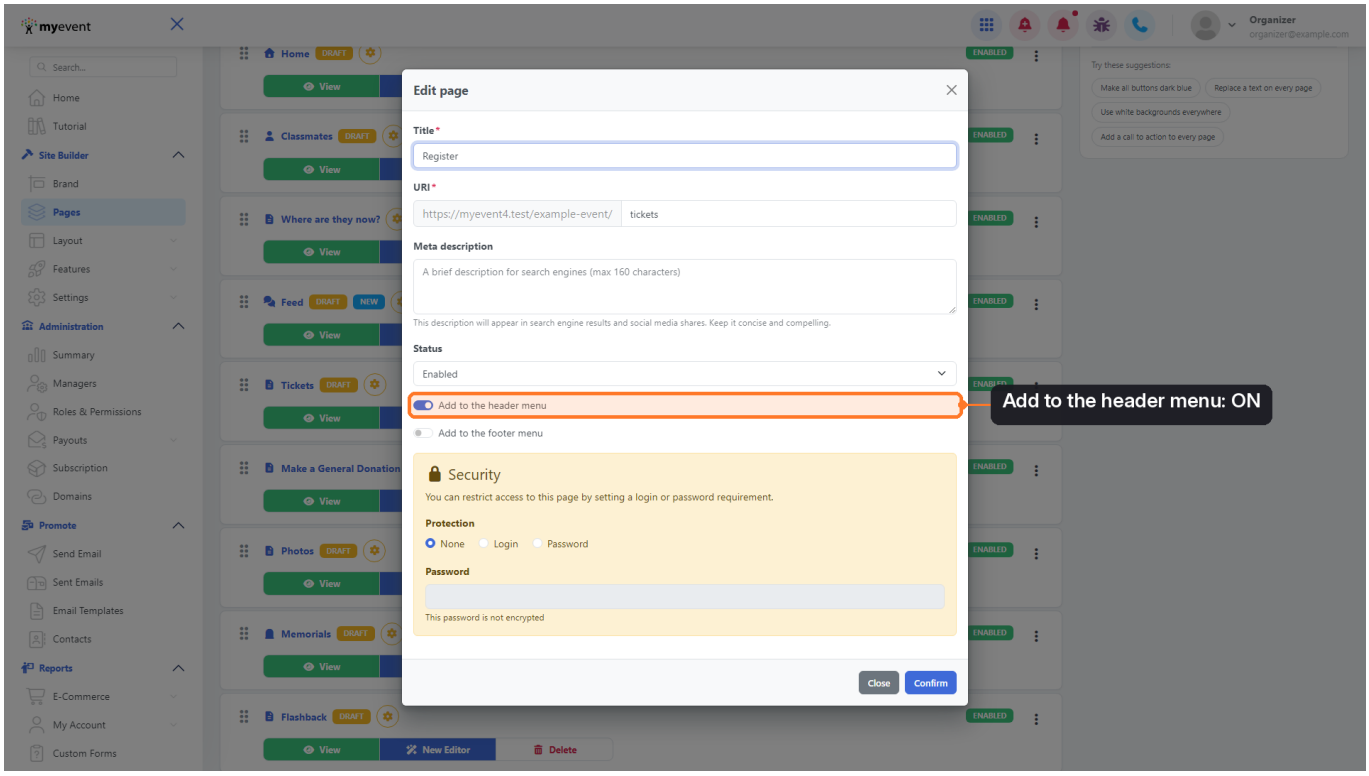

Step 2: Open the page's settings Find the page whose menu label you want to change, then click the yellow **gear icon** next to its name.

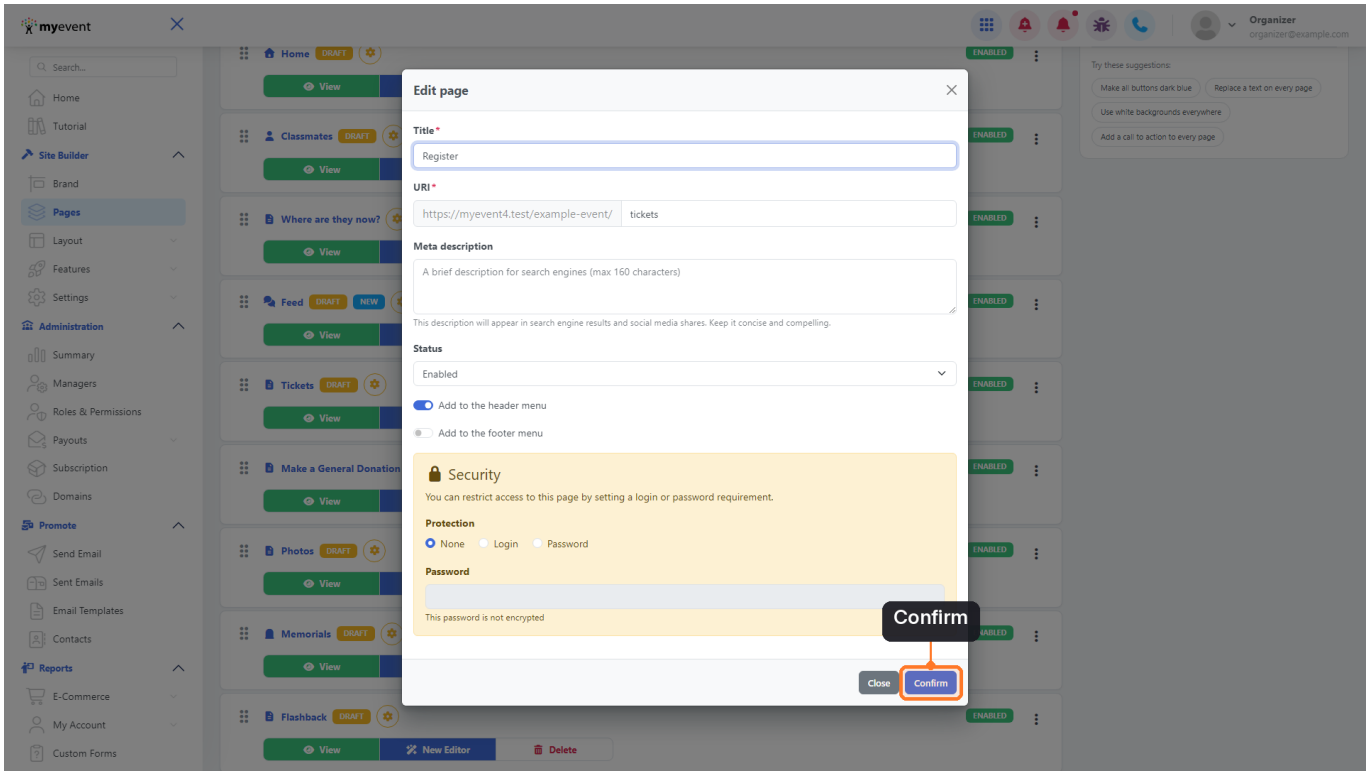

Step 3: Type the new name In the **Edit page** window, replace the text in the **Title** field with the label you want in your menu, for example *Register*.

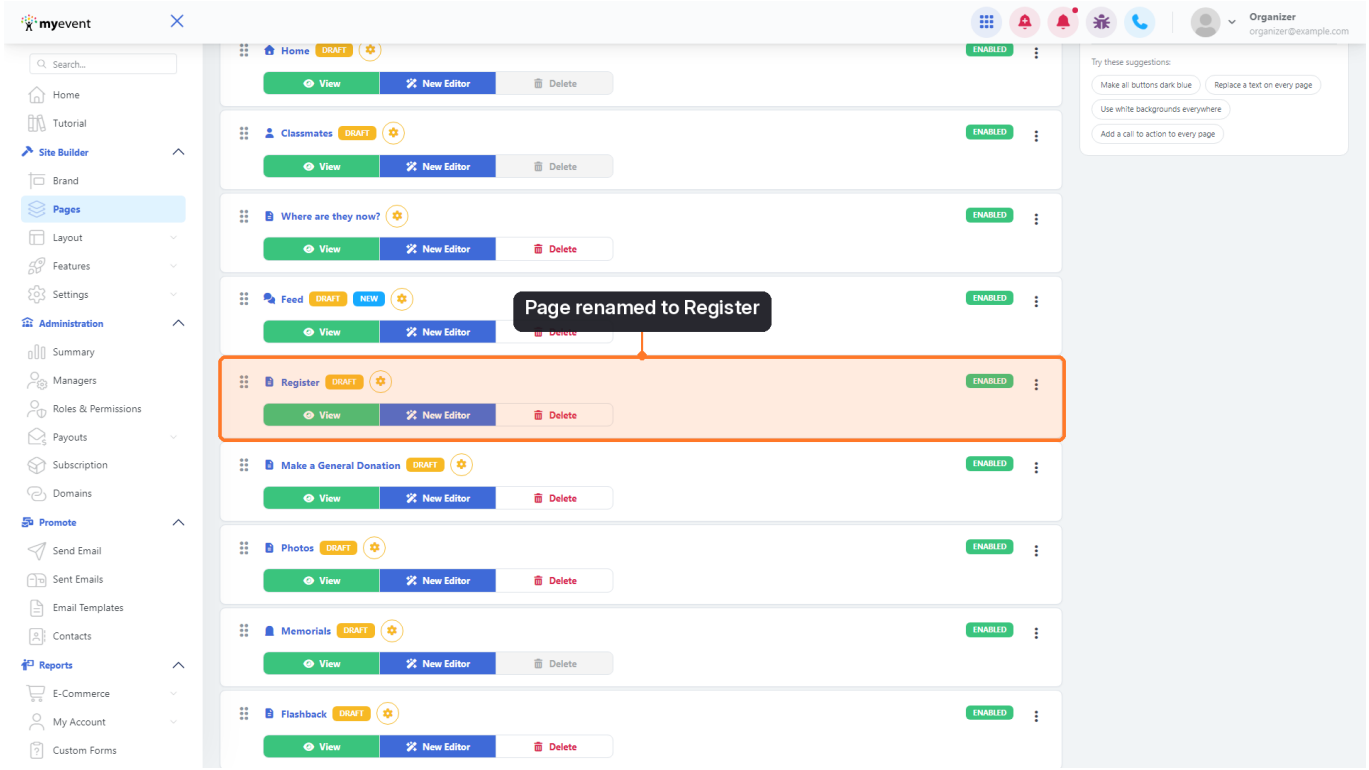

Step 4: Keep it in the header menu Make sure **Add to the header menu** is switched on. If it's off, the page won't appear in your header menu at all.

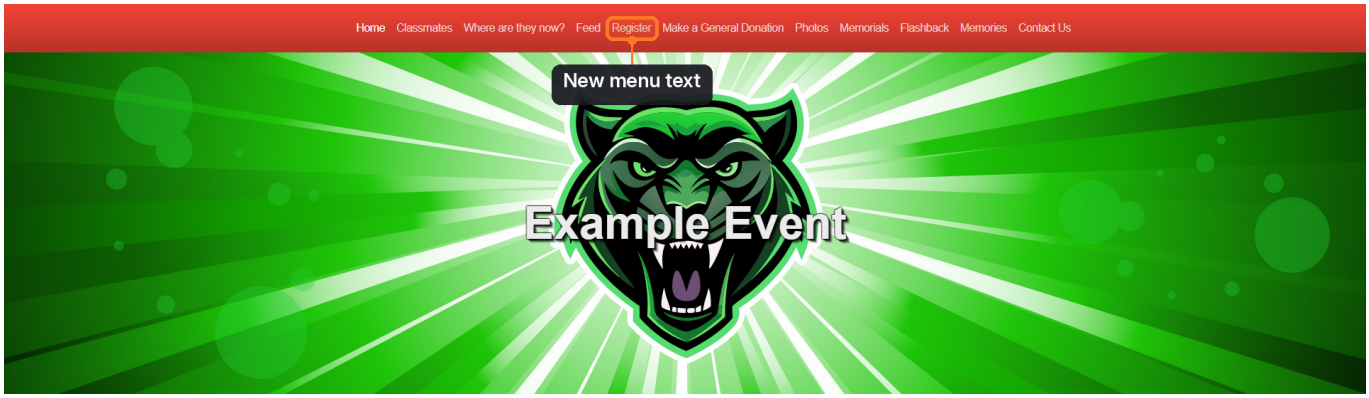

Step 5: Save your change Click **Confirm**.

Step 6: Check the result Your page now shows its new name in your list of pages.

Your website's header menu also uses the new text right away.

Good to know

- **Your page link stays the same.** Renaming a page doesn't change its web address, so any links you've already shared keep working.
- **Is your site in French?** Just type the French label you want, for example **Inscription** or **S'inscrire**.
- **Want the page in your footer too?** Turn on **Add to the footer menu** in the same window.
