

Header & Menu

Category: Design, Branding & Navigation

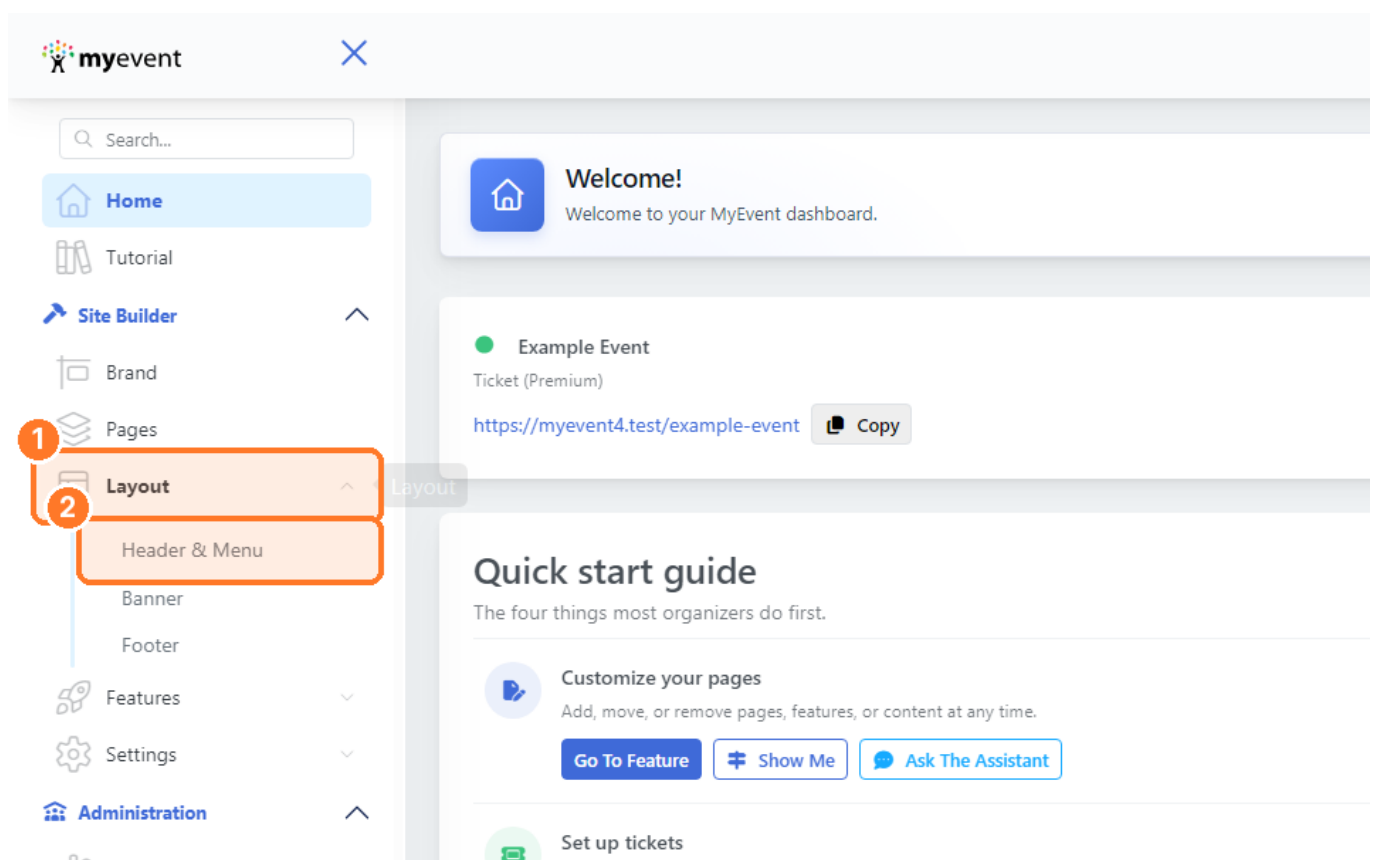

Published: Oct 09, 2026

Reading Time: 5 min

Your header is the bar at the top of every page of your event website. It holds your logo (or your event name) and the menu your guests use to get around. You set it all up on one page, and a live preview shows each change before your guests see it.

Step 1: Open Header & Menu

From your dashboard, click **Layout** in the side menu, then click **Header & Menu**.

The page has three tabs: **Logo & title**, **Layout & style** and **Menu items**. The **Preview** on the right shows your header as you work. Use **Computer** and **Phone** above it to switch views.

Header & Menu

Step 3: Choose your menu style

Open the **Layout & style** tab. Under **Menu style on computers**, pick one of three styles. Phones and tablets always use a burger menu.

- **Full menu bar:** every menu item is shown across the top.
- **Burger menu:** a **Menu** button opens a side panel with all your items.
- **Automatic:** the full bar while it fits, and a burger menu once you have more items.

Step 5: Keep the header visible while scrolling

Under **Behavior**, turn on **Keep the header visible while scrolling** if you want your menu to stay at the top of the screen as visitors scroll down.

The screenshot shows the 'Layout & style' settings panel for a website header. The panel is divided into several sections:

- Menu style on computers:** This section allows users to choose the menu style for desktop devices. It includes three options: 'Full menu bar' (Every menu item is shown across the top), 'Burger menu' (A 'Menu' button opens a side panel with all your items), and 'Automatic' (Full bar while it fits, burger menu when you add more items). A note indicates that with 9 menu items, the burger menu or automatic option will look cleaner on a laptop. Below this, there is a 'Burger panel color' section with 'Light' and 'Dark' toggle buttons.
- Colors:** This section allows users to update the header background and menu & title text colors. The header background is set to 'Theme: primary (default)' and the menu & title text is set to 'Automatic (best contrast)'.
- Behavior:** This section contains the 'Keep the header visible while scrolling' toggle, which is currently turned on. A note states: 'The header stays pinned at the top as visitors scroll down.'

On the right side of the panel, there is a 'Preview' section showing the website header on a computer screen. The preview includes a red header bar with a green tiger logo and the text 'Example Event'. A 'Save changes' button is located at the bottom right of the preview section.

Step 6: Check the phone view and save

Click **Phone** above the preview to see your header on a small screen, then **Computer** to switch back.

2

Save changes to make them live

Step 7: Organize your menu items

Open the **Menu items** tab. This list is the exact order your guests see in your menu. Reordering pages under **Pages** does not change your menu. Changes on this tab save right away, so there is no Save button to click.

The screenshot shows the 'Header & Menu' settings page. The 'Menu Items' tab is selected and highlighted with a red box and a red circle with the number 1. The 'Menu items' list is shown with items like 'Home', 'Classmates', 'Schedule', 'Where are they now?', 'Tickets', 'Make a General Donation', 'Photos & Memories', 'Photos', and 'Memorials'. A red box and a red circle with the number 2 highlight the 'Add menu item' button and the 'Page' link. A red box and a red circle with the number 3 highlight the 'Dropdown' link. A 'Show menu' toggle switch is visible at the top right of the menu items list. A 'Preview' section on the right shows a mobile view of the website header with the text 'Example Event'.

- **Reorder:** drag an item by its handle (the six dots on the left) to a new spot.
- **Dropdowns:** items can sit inside a dropdown, like *Photos & Memories*. Drag an item under a dropdown to put it inside.
- **Show menu:** the switch at the top right turns the whole menu on or off.
- **Disabled pages:** if a page in your menu is disabled, its row says *Page disabled* with an **Enable page** link. Guests can't see it until you enable it.

The screenshot displays the Wix Editor's page management interface on the left and a live site preview on the right.

Page Management List:

- Home**: Page: Home
- Classmates**: Page: Classmates
- Schedule**
- Where are they now?**: Page: Where are they now?
- Tickets**: Page: Tickets
- Make a General Donation**: Page: Make a General Donation
- Photos & Memories**: Dropdown - 3 items
 - Photos**: Page: Photos
 - Memorials**: Page: Memorials
 - Memories**: Page: Memories
- Contact Us**: Page: Contact Us (highlighted with an orange box and labeled '2')
- Feed**: Page: Feed (labeled '1' with a small orange circle)

A blue information bar at the bottom states: "This is the order visitors see. Reordering pages under Pages does not change the menu."

Preview Panel:

The preview shows a website header with a red top bar containing a logo and a "Menu" button. Below it is a green banner featuring a tiger head and the text "Example Event". A message below the banner reads: "We're planning a Class Reunion! Save this page to your favorites and keep returning to see what's new." The preview includes toggle switches for "Computer" and "Phone" views.

Step 8: Change a menu label

Click an item's name, type a shorter label, and press **Enter**. Only the menu label changes. The page keeps its full title and its web address, so you don't need to rename the page.

How visitors on a computer see your header with the burger menu.

The preview updates as you change settings.

Pages not in the menu 3

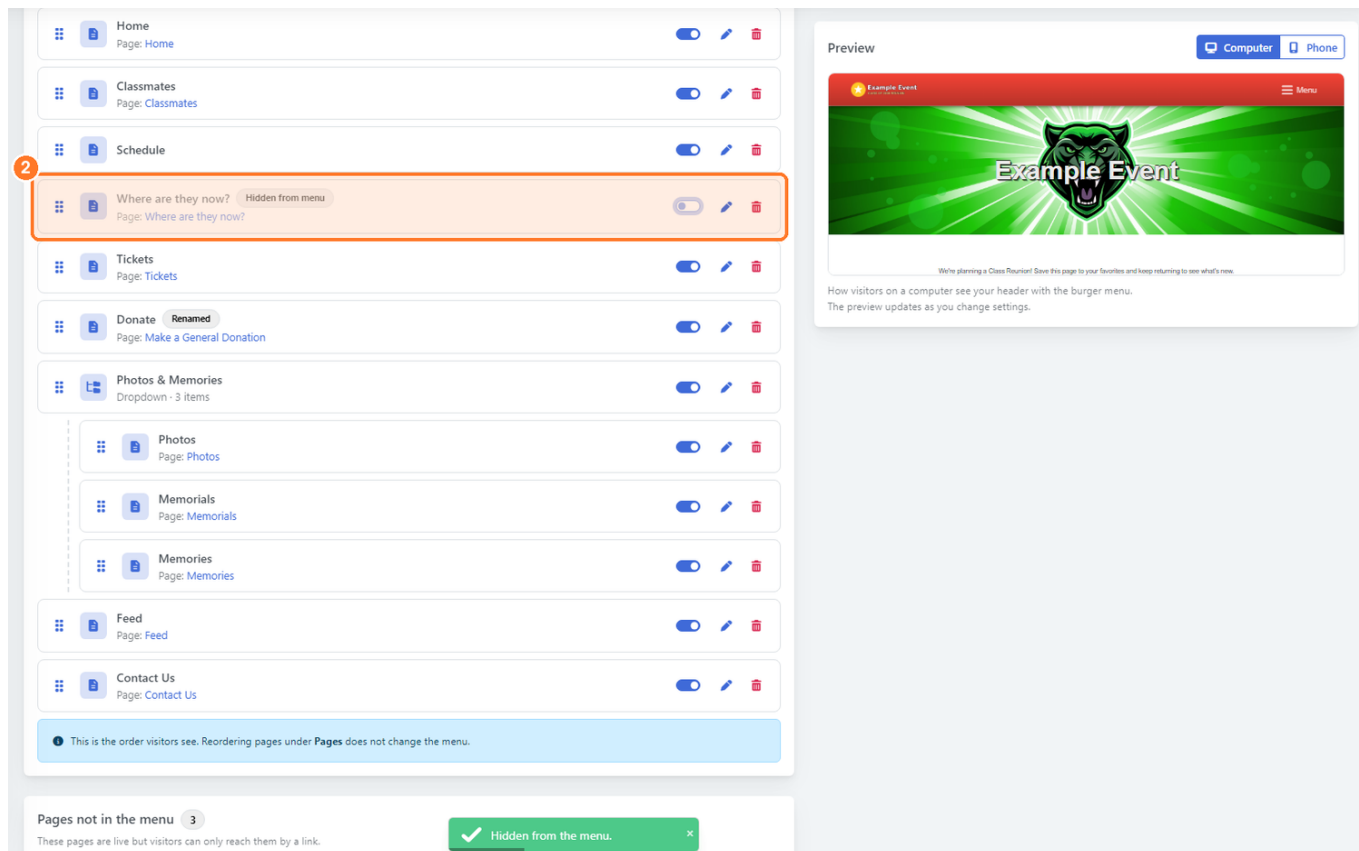

These pages are live but visitors can only reach them by a link.

A **Renamed** badge shows the label is different from the page title, and the line below still shows the page name.

The screenshot displays a website management interface. On the left, a list of pages is shown with columns for a grid icon, a page icon, the page title, the page name, a toggle switch, an edit icon, and a delete icon. The 'Donate' page is highlighted with an orange border and has a 'Renamed' badge. Below the list, a blue banner states: 'This is the order visitors see. Reordering pages under Pages does not change the menu.' At the bottom left, a section titled 'Pages not in the menu' shows a count of 3 and a note: 'These pages are live but visitors can only reach them by a link.' A green 'Label saved.' notification is visible at the bottom center. On the right, a 'Preview' section shows a mobile view of the website with a green header, a tiger logo, and the text 'Example Event'. Below the preview, text explains: 'How visitors on a computer see your header with the burger menu. The preview updates as you change settings.'

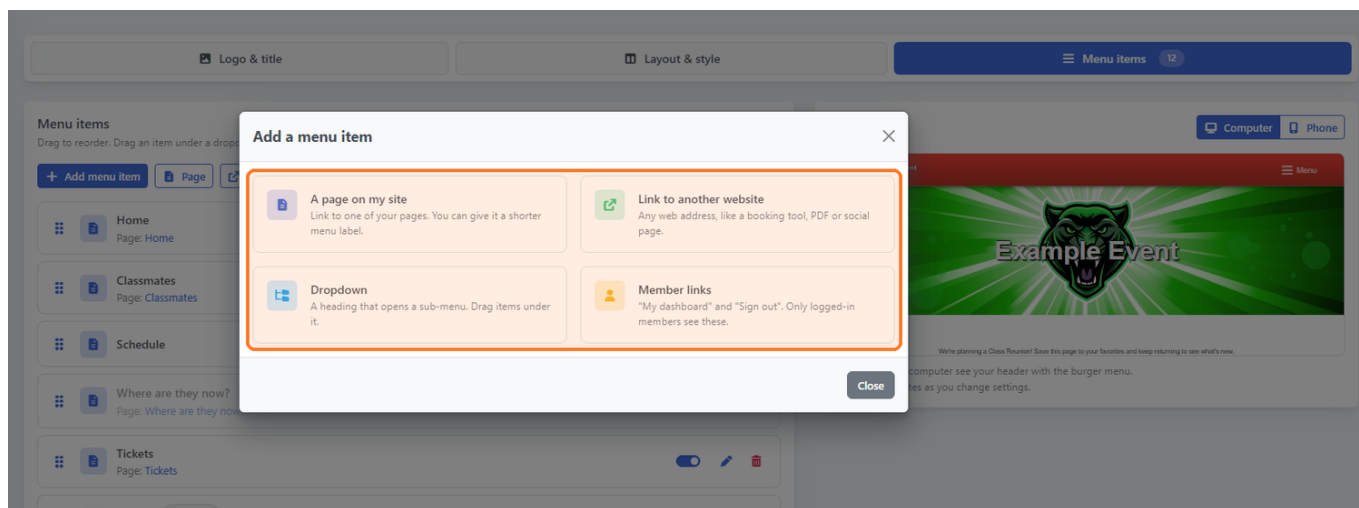

Step 9: Hide an item without deleting it

Turn off the switch on the right of an item. It stays in your list, marked **Hidden from menu**, and you can turn it back on at any time.

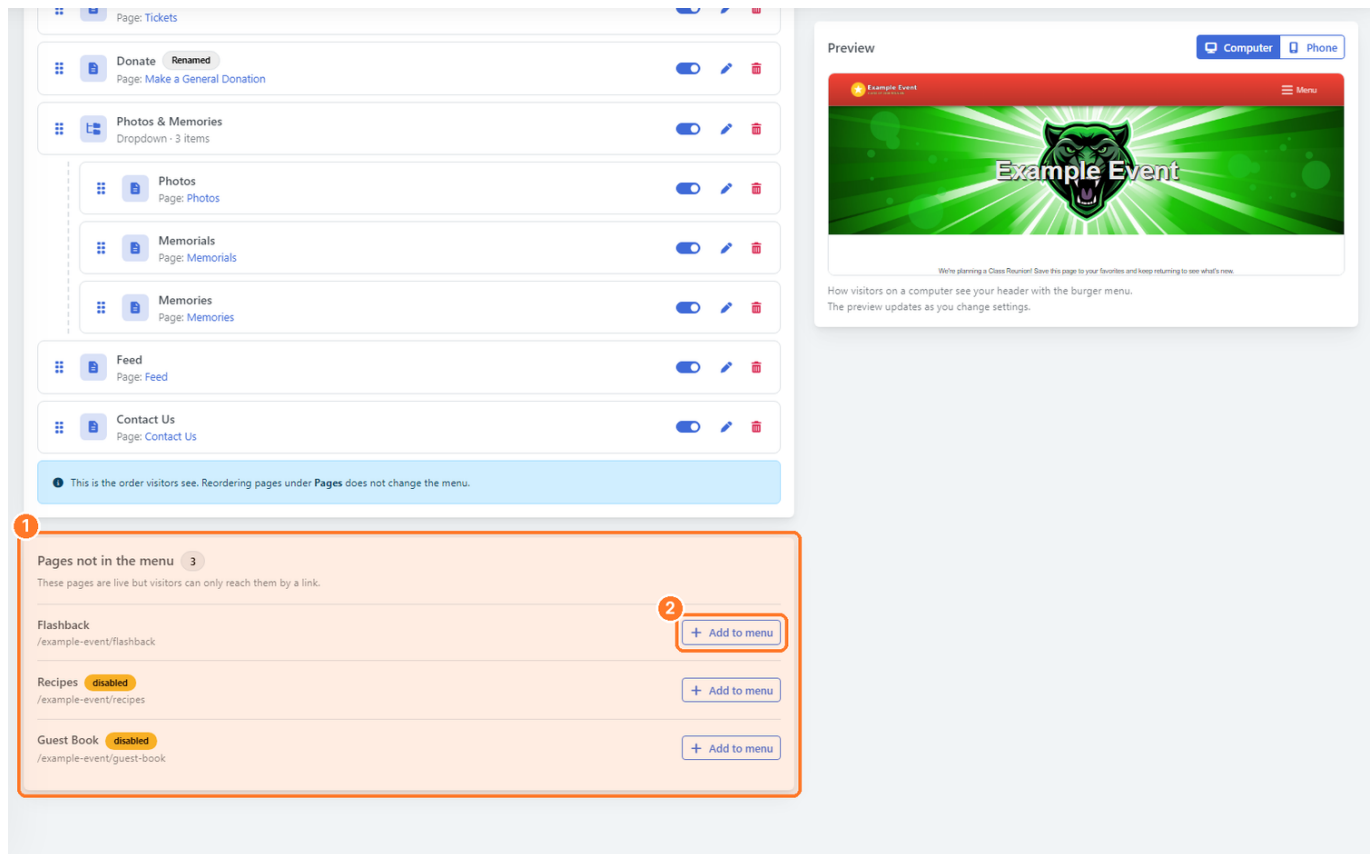

Step 10: Add to your menu

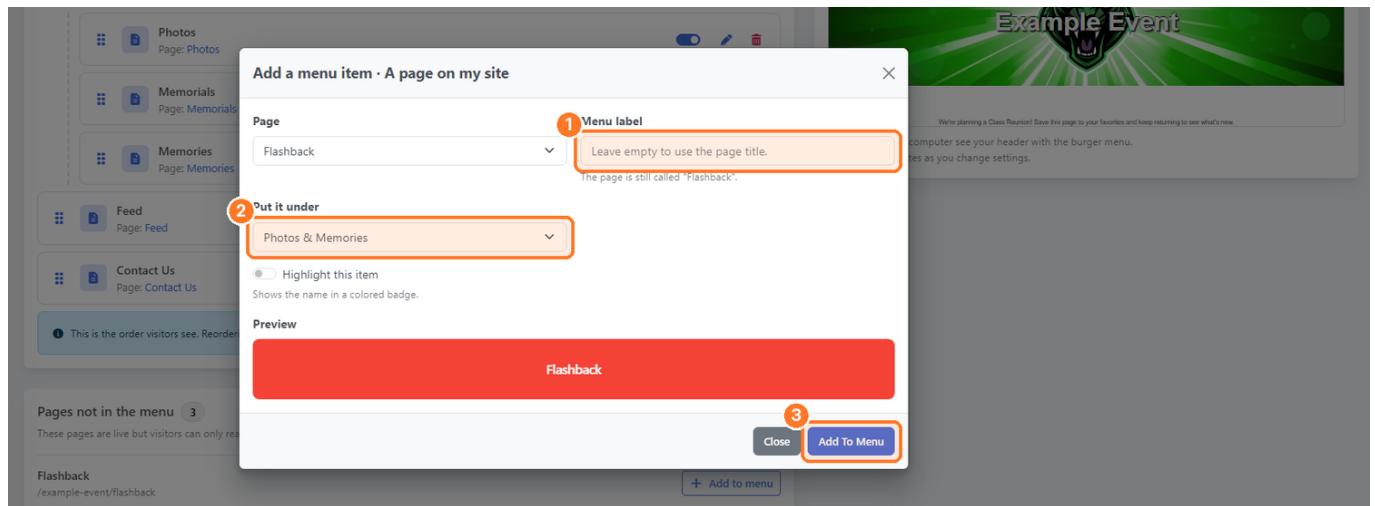

Click **Add menu item** (or the quick **Page**, **Link** and **Dropdown** buttons) and choose what to add: **A page on my site**, **Link to another website**, **Dropdown**, or **Member links**.

Below the list, **Pages not in the menu** shows the live pages visitors can only reach by a link. Click **Add to menu** next to the page you want.

Give it a shorter **Menu label** if you like (leave it empty to use the page title), choose where it goes under **Put it under**, then click **Add to menu**.

The screenshot displays a website management interface. On the left, a list of pages is shown with columns for a menu icon, page title, page URL, and a toggle switch. The pages listed are: Schedule, Where are they now? (with a 'Hidden from menu' label), Tickets, Donate (renamed to 'Make a General Donation'), Photos & Memories (dropdown with 4 items), Photos, Memorials, Memories, Flashback (highlighted with an orange border), Feed, and Contact Us. Below this list, a note states: 'This is the order visitors see: Reordering pages under Pages does not change the menu.' At the bottom left, there is a section for 'Pages not in the menu' (2 items) and a 'Recipes' section (disabled) with an 'Add to menu' button.

On the right, a 'Preview' window shows the website header. It features a red top bar with 'Example Event' and a 'Menu' button. Below the bar is a green banner with a tiger head logo and the text 'Example Event'. The preview also shows a small text block: 'We're planning a Class Reunion! Save this page to your favorites and keep returning to see what's new.' Below the preview, a note states: 'How visitors on a computer see your header with the burger menu. The preview updates as you change settings.'

Good to know

- Changes on **Logo & title** and **Layout & style** are previewed first and go live when you click **Save changes**.
- Changes on **Menu items** (order, labels, show or hide, new items) save right away.
- Renaming a menu item never changes the page's title or web address.
- The **Add to the header menu** and **Add to the footer menu** switches in a page's settings (Pages, then the gear icon) add or remove that page here too.
- When you save a page's settings under Pages, its menu label is reset to the page title. If you gave it a shorter label, set it again on the Menu items tab.
