How to use the AI Page Editor

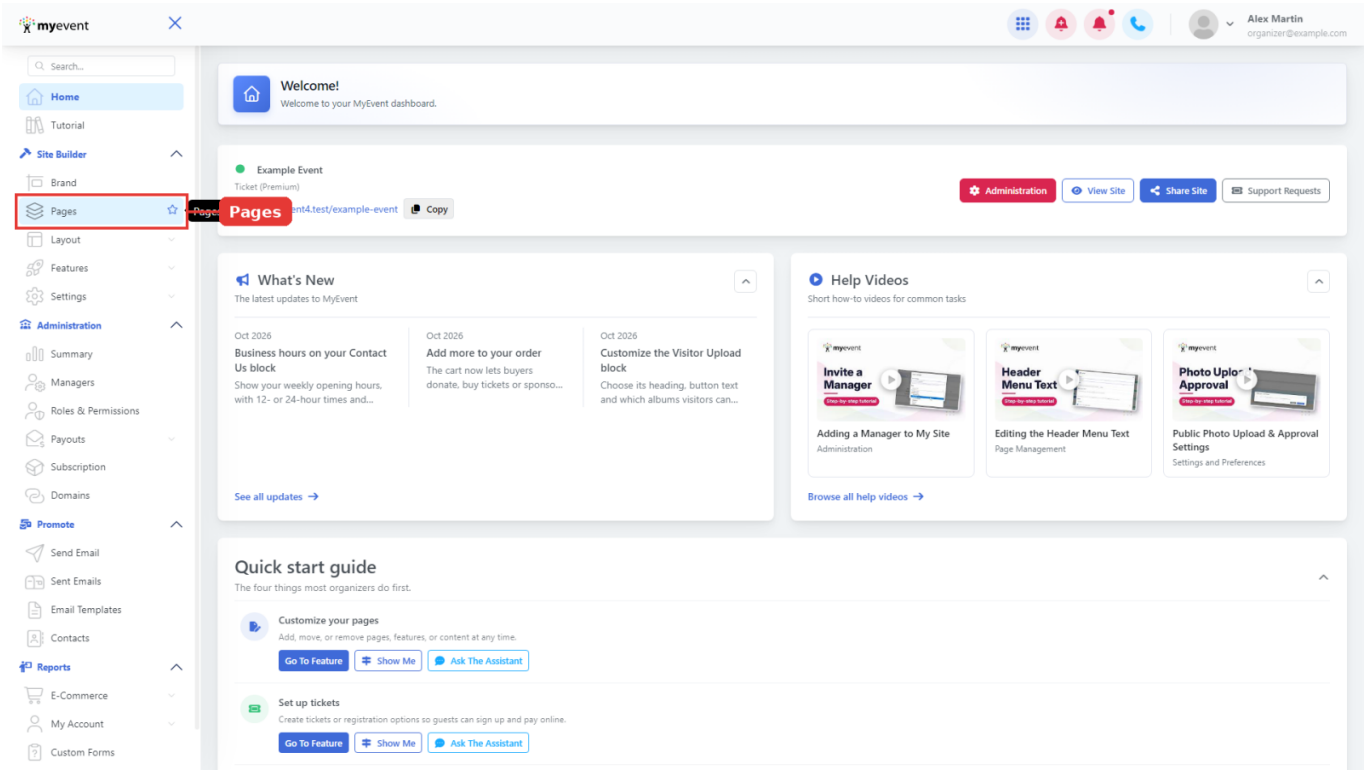

Category: Éditeur de pages par IA
Published: Nov 03, 2026
Reading Time: 4 min

The AI Page Editor lets you change a page of your MyEvent website by describing what you want in plain language, for example "add a section", "rewrite the intro" or "change the button colours". The AI makes the change in your draft and shows it in the live preview, so you can check it before anything goes live.
Package: The AI Page Editor is a Premium feature. Manual Forms is included in every package.

Open the page you want to change

1. Go to Pages

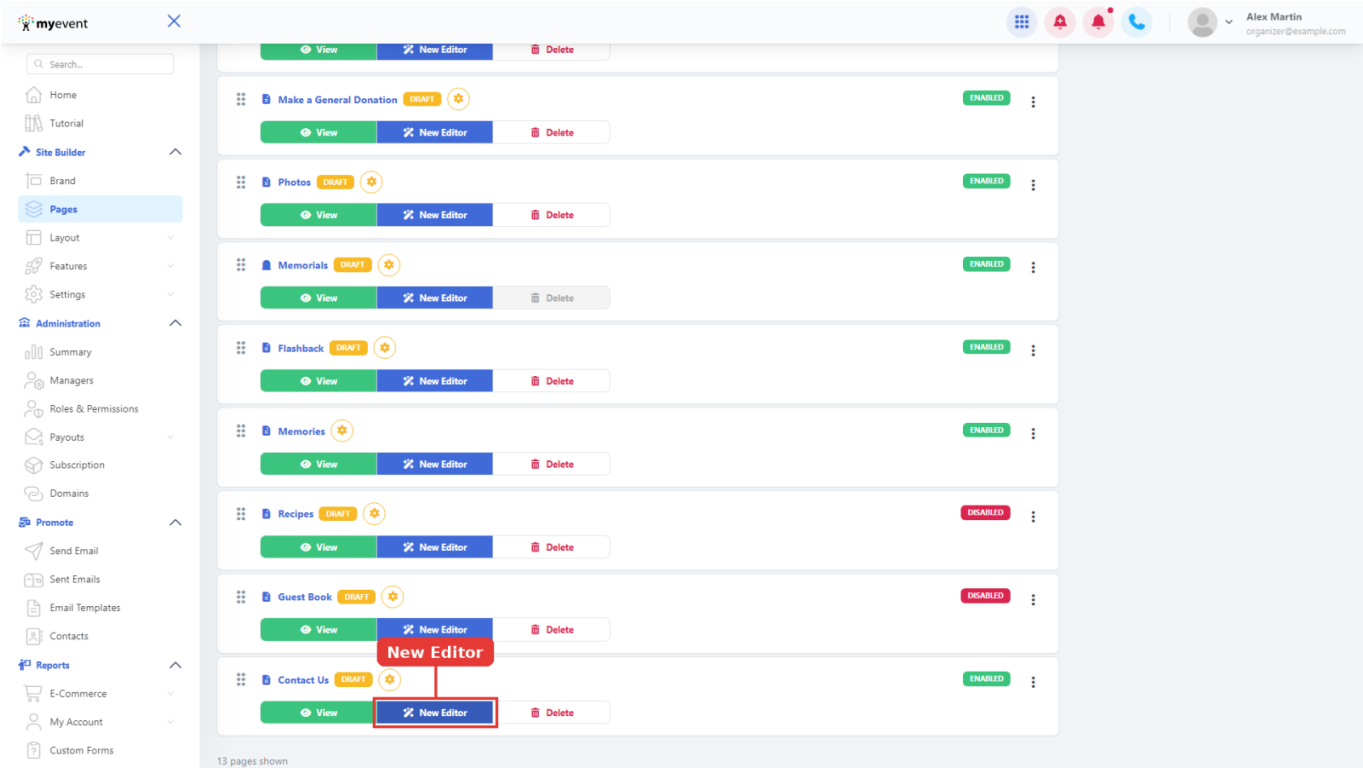

From your dashboard, open **Site Builder** in the menu on the left and click **Pages**.

Go to Pages

2. Click New Editor

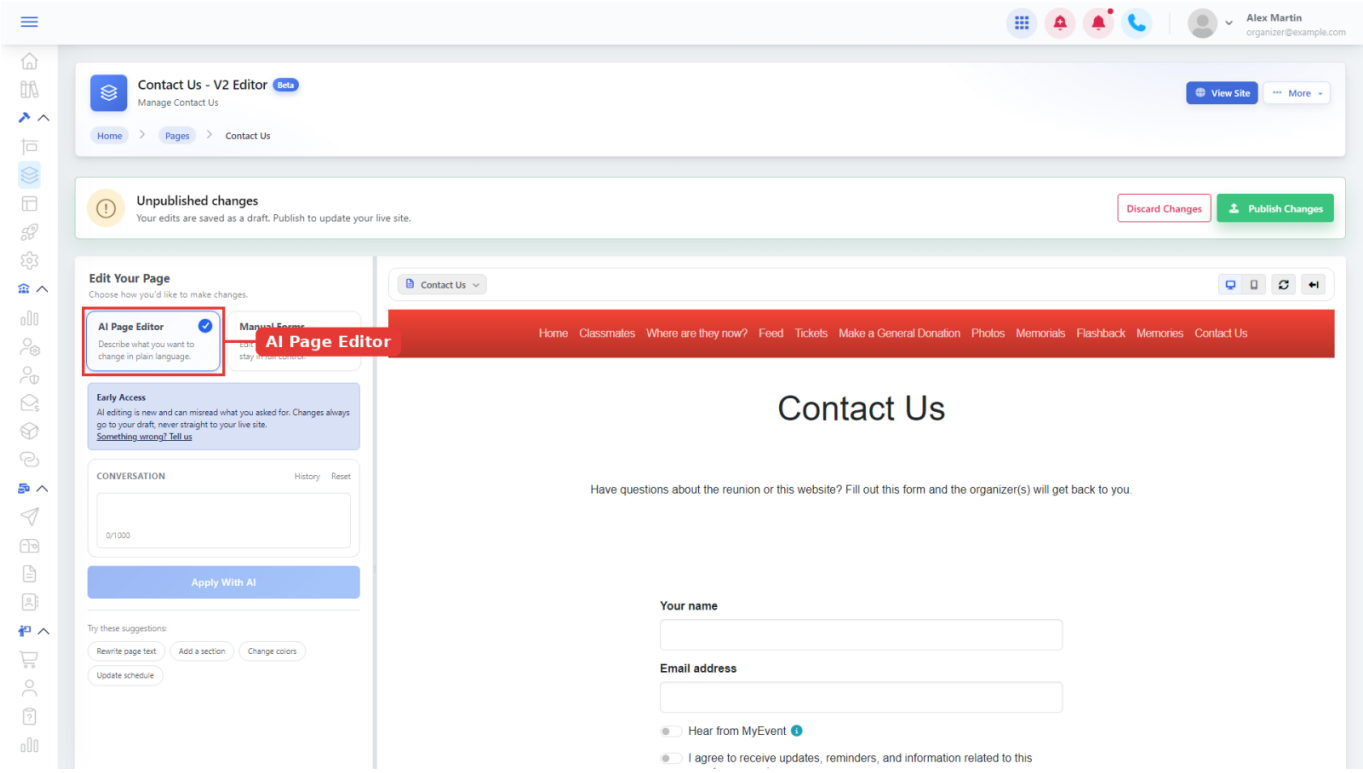

Find the page you want to change and click **New Editor** on its row. The page opens in the editor, with a live preview of your page on the right.

Click New Editor

3. Choose AI Page Editor

Under **Edit Your Page**, click **AI Page Editor** ("Describe what you want to change in plain language"). To edit the fields yourself instead, choose **Manual Forms**.

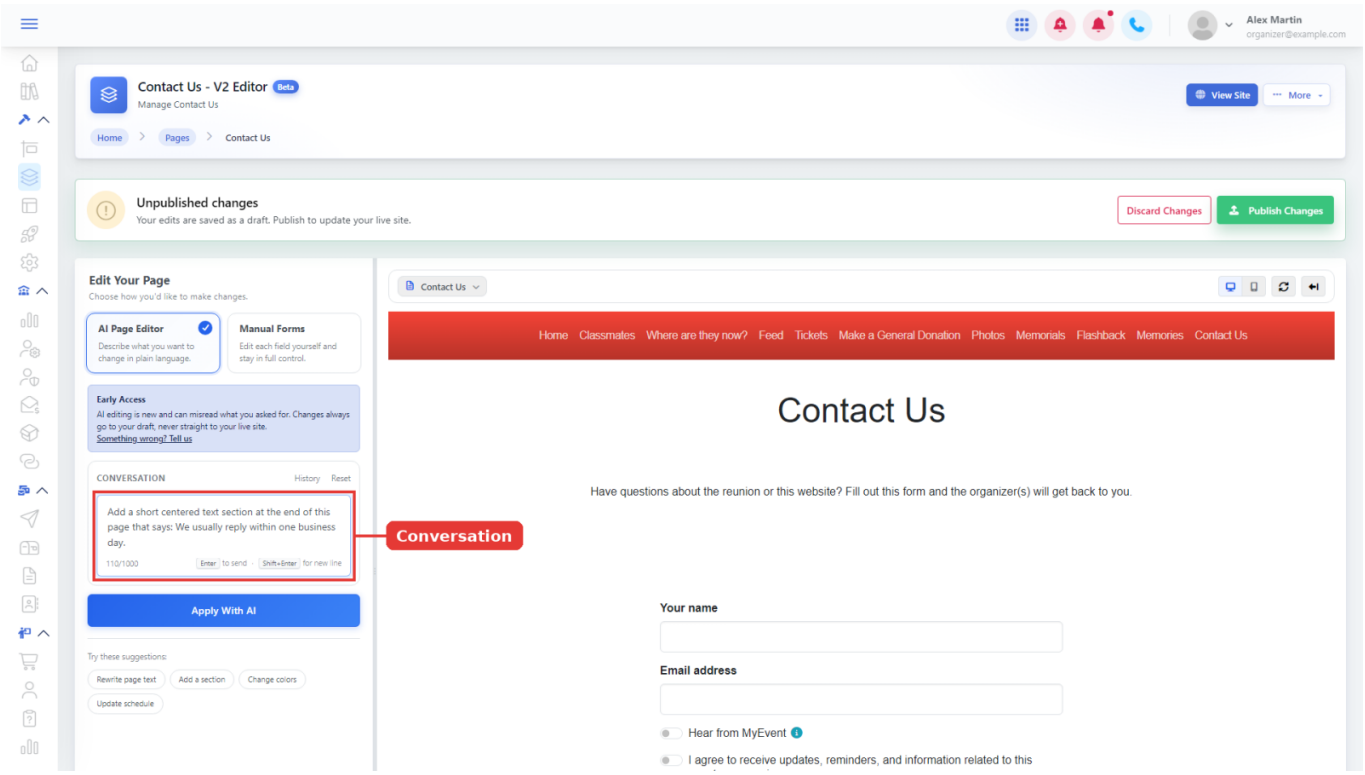

Choose AI Page Editor

Ask the AI for a change

4. Describe your change

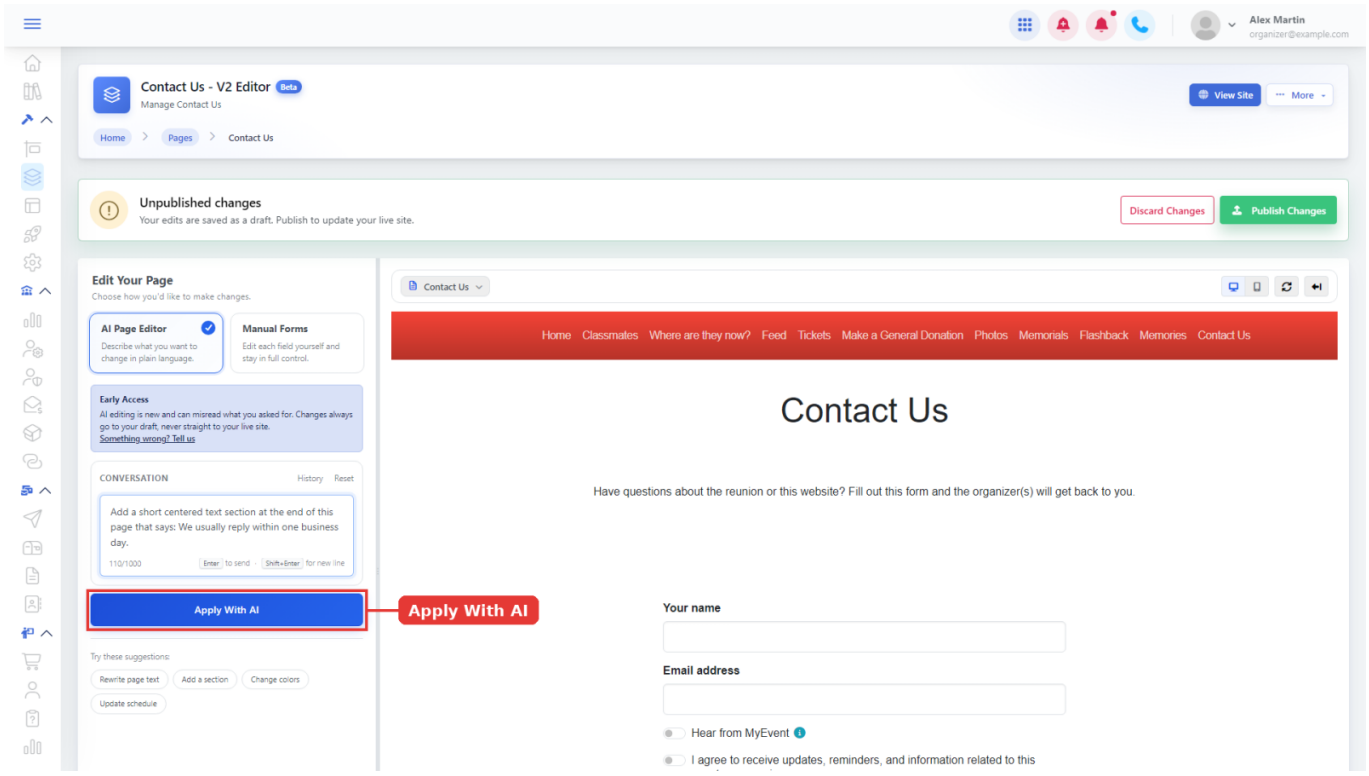

In the **Conversation** box, type what you want in plain words, for example: "Add a short centered text section at the end of this page that says: We usually reply within one business day." You can type up to 1,000 characters. Not sure where to start? Click one of the suggestions under the box: **Rewrite page text**, **Add a section**, **Change colors** or **Update schedule**.

Describe your change

5. Click Apply With AI

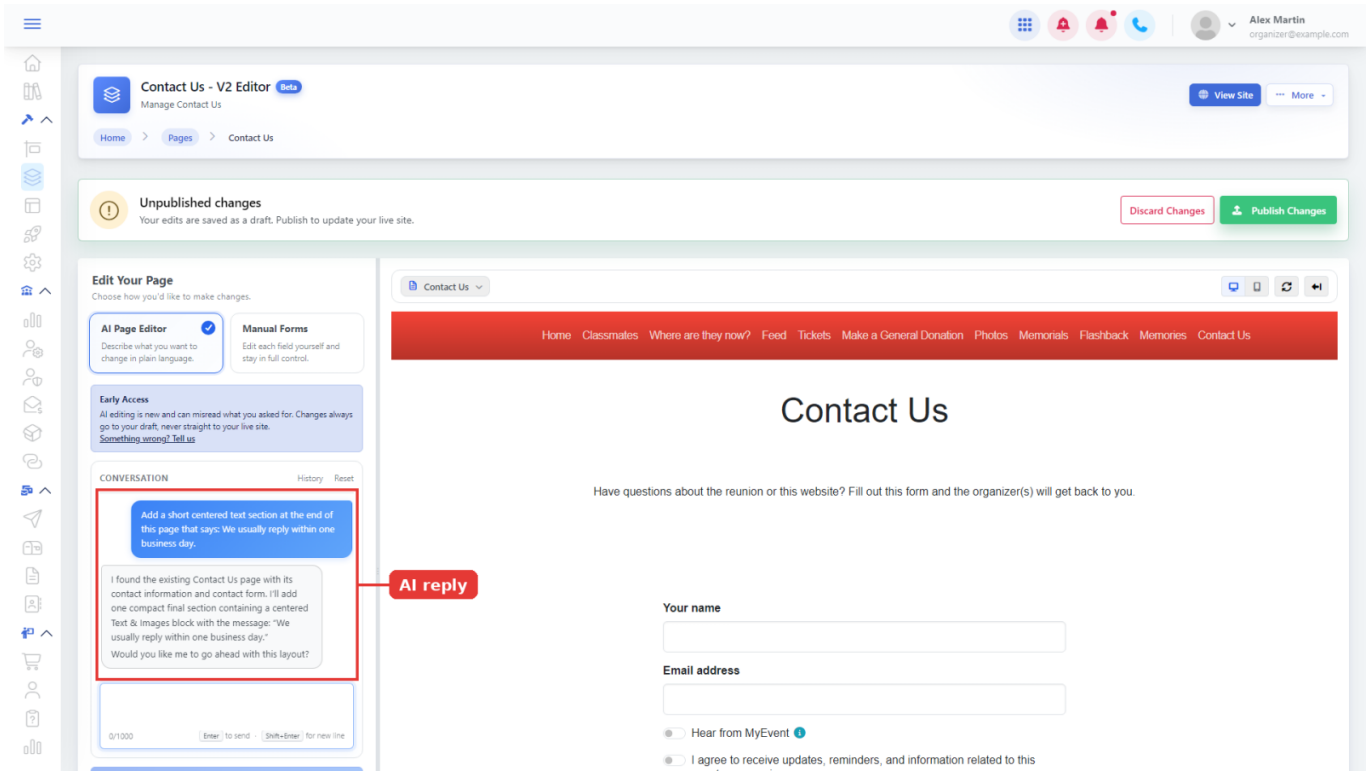

Click **Apply With AI**, or press Enter (Shift+Enter adds a new line). It takes a few seconds.

Click Apply With AI

6. Answer the AI if it asks a question

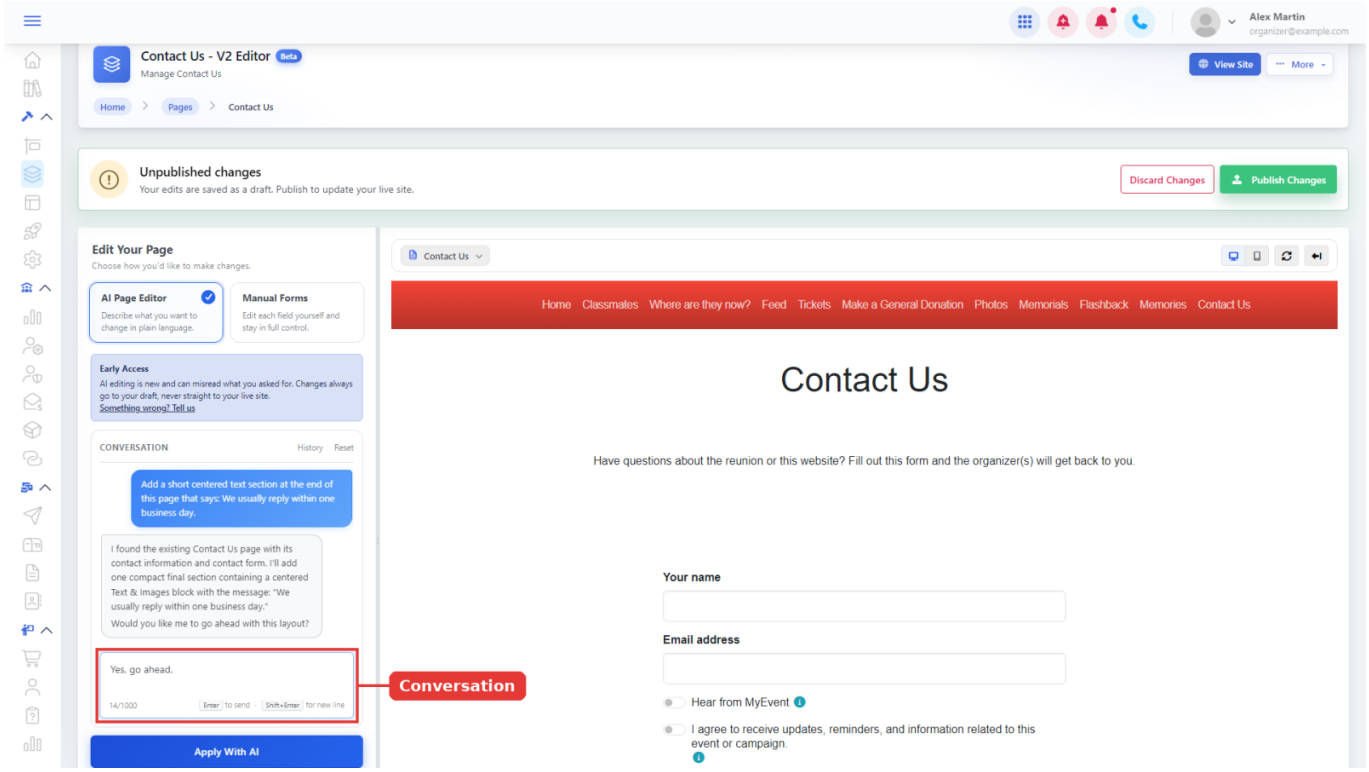

Sometimes the AI explains its plan and asks you to confirm before it changes anything. Read its reply.

Answer the AI if it asks a question

7. Confirm or adjust

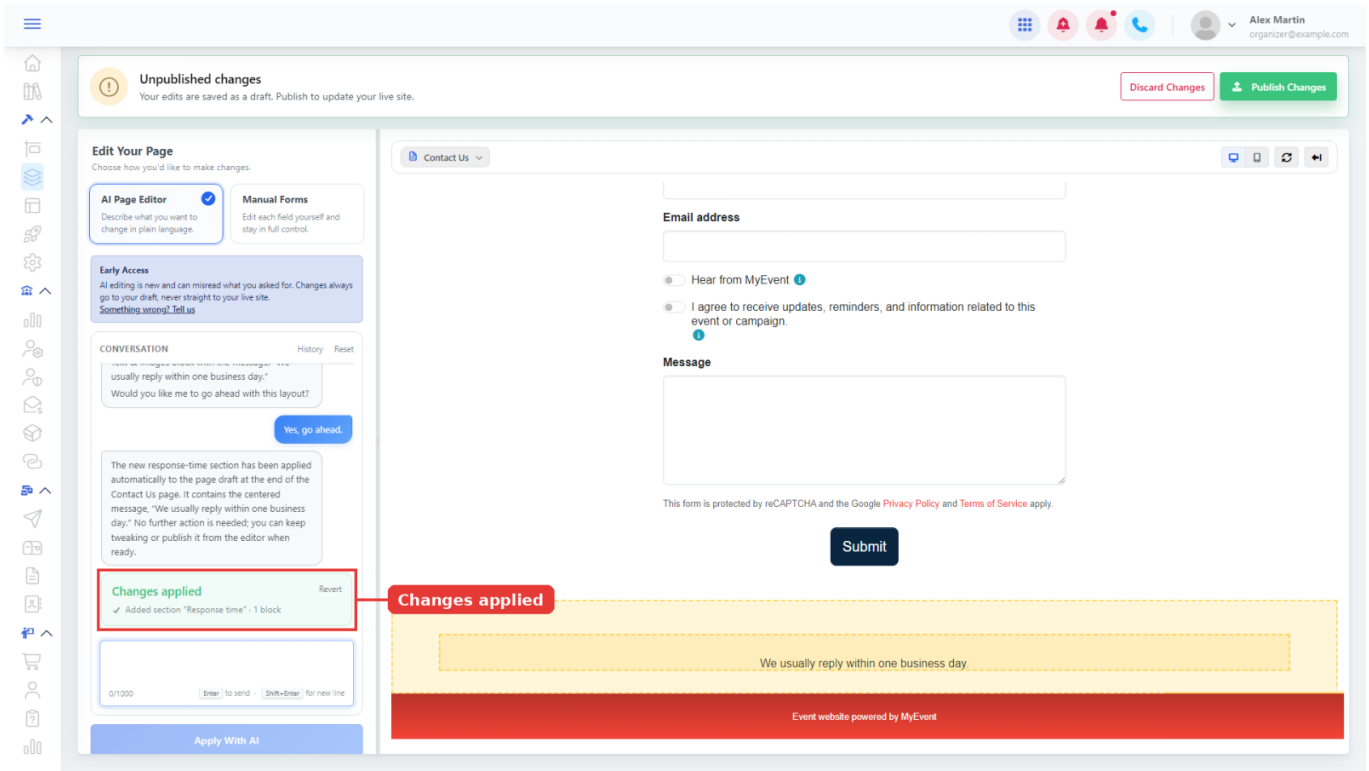

Type your answer, for example "Yes, go ahead.", or tell it what to do differently, then click **Apply With AI** again.

Confirm or adjust

8. Check the result

The AI explains what it did and a **Changes applied** card lists what changed (here: Added section "Response time" · 1 block). The preview on the right shows your page with the change. You can type a follow-up request to adjust it.

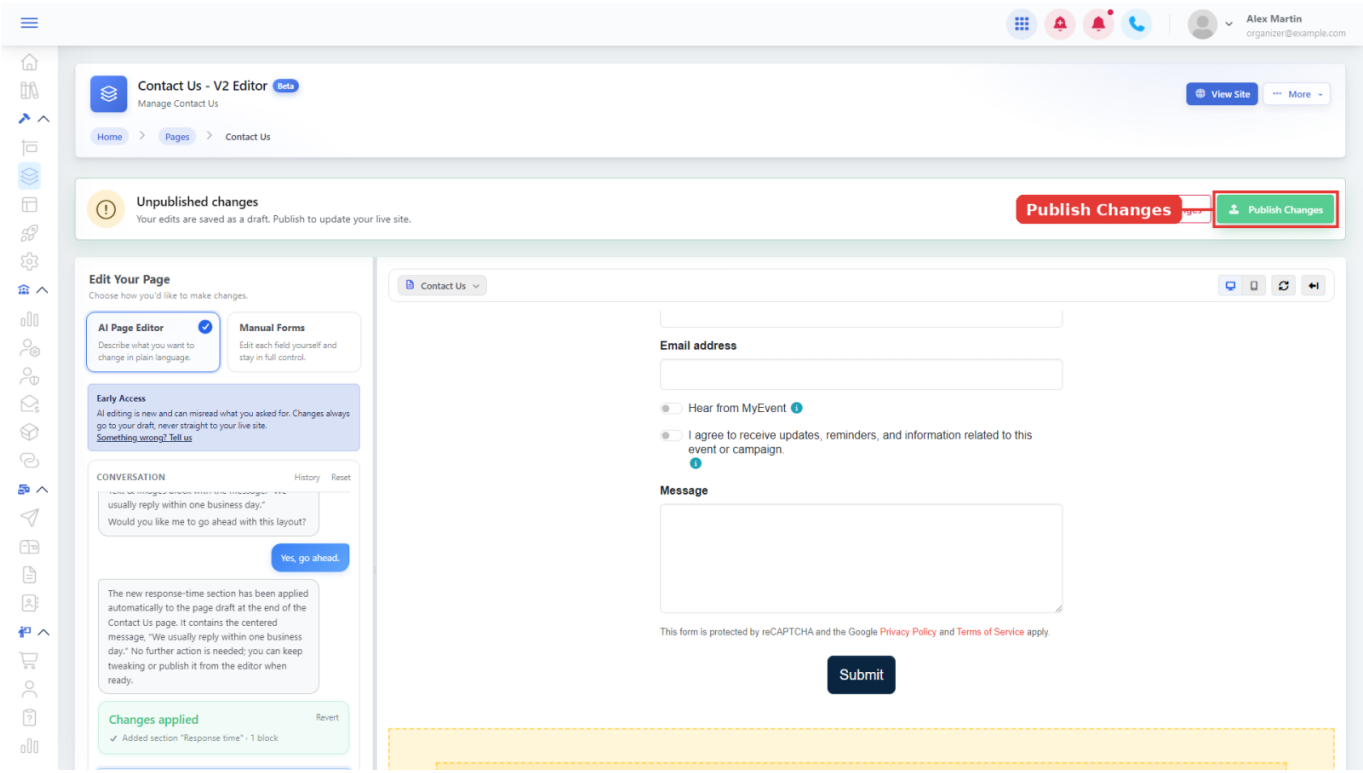

Check the result

Publish or undo the change

9. Publish when you are happy

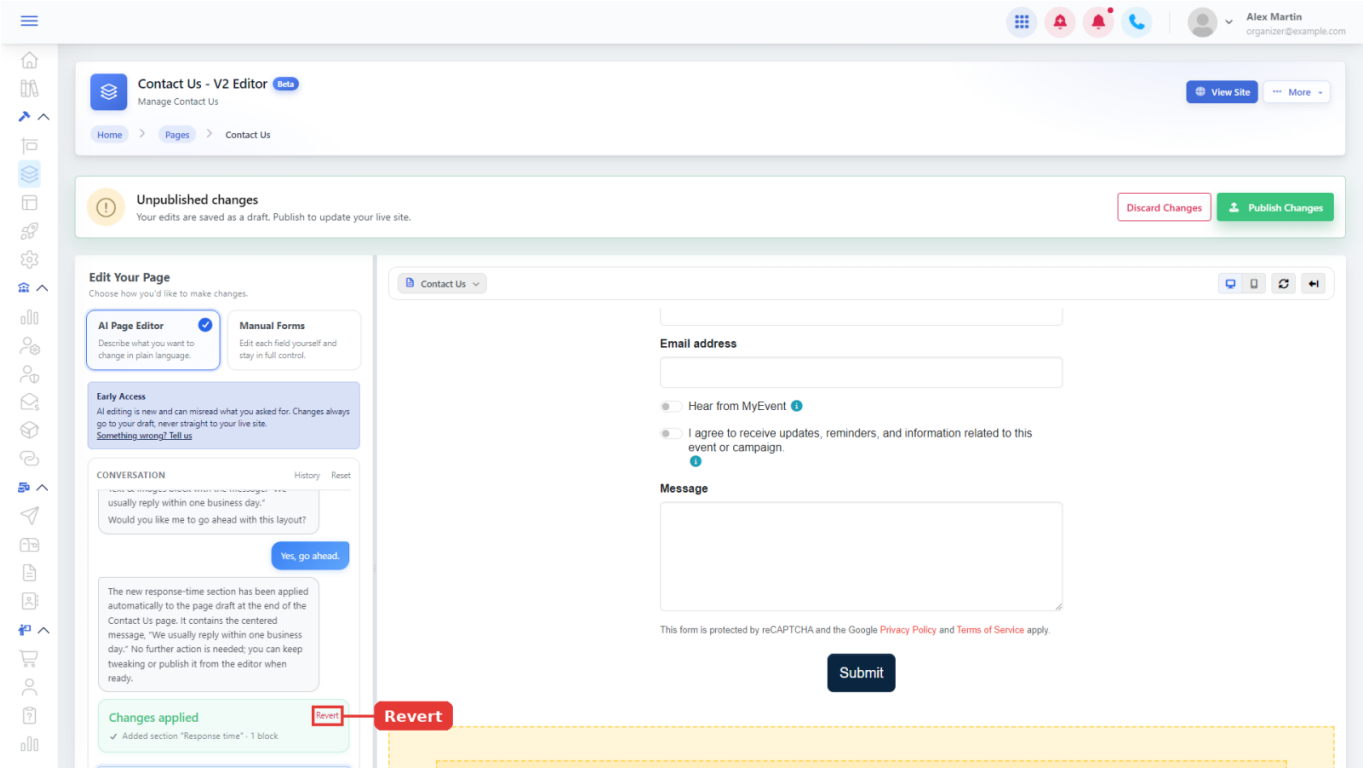

AI changes are saved to your draft, never straight to your live site. The **Unpublished changes** bar at the top reminds you. Click **Publish Changes** to make them live, or **Discard Changes** to drop all your draft edits.

Publish when you are happy

10. Not what you wanted? Click Revert

Click **Revert** on the **Changes applied** card to undo that AI change. Your page goes back to how it was before the request.

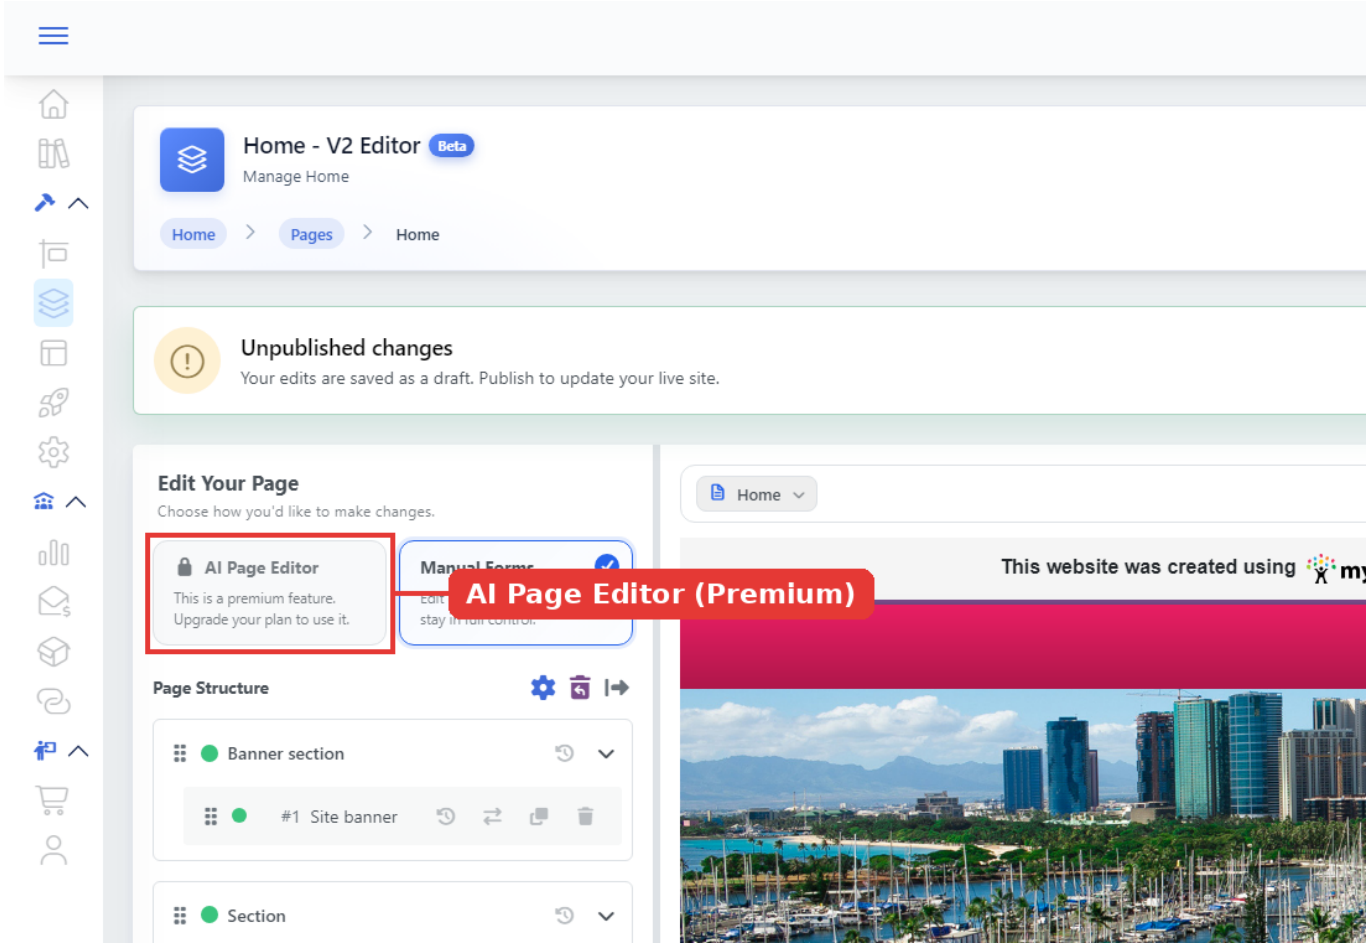

Not what you wanted? Click Revert

On the Basic package

11. The AI Page Editor is a Premium feature

On a Basic package the **AI Page Editor** card is locked and reads "This is a premium feature. Upgrade your plan to use it." **Manual Forms** stays available. Upgrade your package, or contact support, to turn on the AI Page Editor.

The AI Page Editor is a Premium feature

Good to know

- Be specific: name the section, the text or the colour you want. One change per request works best.
- Want to change one block? Click it in **Manual Forms** first, then switch back to **AI Page Editor**: a **Selected block** chip shows the AI which block you mean (see this article for more information about editing with the Manual Forms option).
- You can attach a picture with **Upload image** (JPEG, PNG or GIF, up to 10 MB).
- Click **History** to see earlier conversations, or **Reset** to start a new one.
- AI editing is new (Early Access) and can misread a request. If something goes wrong, click **Something wrong? Tell us** in the editor.
- To make the same change on every page at once, see *How to edit multiple pages with AI*.
